The National Aquarium is a nonprofit organization whose mission is to inspire conservation of the world’s aquatic treasures.
Every day, I am impressed by the National Aquarium’s staff, who have dedicated themselves to our compelling mission to inspire conservation of the world’s aquatic treasures. Whether working to enlighten guests about the plight of coral reefs or coordinating restoration efforts throughout the Chesapeake Bay watershed, our staff—both paid and volunteer—are singularly focused on that mission. It defines who we are.

This year saw the opening of Blacktip Reef, which greatly increased our capacity to delight and educate 1.3 million annual guests with a message of hope for these iconic Indo-Pacific coral reefs. Our animal rescue team released its 100th rehabilitated animal, and our conservation action team restored its 25th acre of Chesapeake Bay habitat. We also completed Phase One of BLUEprint, an intense examination of our future potential and the evolving role of aquaria amid unparalleled global climate change.

Through revitalized exhibits, animal care that is second to none, and conservation-based experiences for Marylanders and guests from 49 states and 17 countries, we are becoming an international force for aquatic awareness and action. This trend will continue.

All of our achievements in 2013 were made possible through the support of our generous donors. Your unique contributions allow us to realize our vision to change the way humanity views—and cares for—our interconnected, life-giving ocean. Thank you for your role in making this vision a reality.

JOHN C. RACANELLI

JOHN C. RACANELLI
CHIEF EXECUTIVE OFFICER

Current as of December 31, 2013
Our National Aquarium community has been engaged in a thorough rethinking of our assets and opportunities, envisioning a future that will position us as thought leaders and inspirational builders for a future of aquatic conservation. Part of that process was developing a comprehensive strategic plan, which is being revised to integrate the findings and recommendations from the BLUEprint process.

Through this important work, we will connect people more directly to aquatic habitats. We will expand our audience to achieve greater impact in the field of conservation. We will protect our immediate environs—the Chesapeake Bay and Mid-Atlantic coast—and build partnerships with organizations with compatible missions. And we will expand our expertise and advocacy for measurable impact in conservation science.

These strategies have led to a catalytic moment in our history that demands that we discard misconceptions and outdated constraints to pave the way for new ideas and a different role in the world. As that vision takes shape, we are excited about the impact we can make in conserving and protecting precious natural resources.

I’d like to extend my deepest gratitude to all of our donors who have supported our pursuit of ocean conservation through their individual contributions. You give us the power to carry out our mission each and every day, and we appreciate your support as we enter a new and exciting stage in our evolution.
THE STORY of ONE

Each person who shifts perceptions, works with passion and inspires others to follow is imperative in the effort to conserve the world’s aquatic treasures. Fortunately, the National Aquarium is blessed with many such individuals. From board leaders and marine specialists to dedicated volunteers and loyal donors, each is making meaningful contributions to the success of our collective mission.
At the National Aquarium, each drop of water is of great value, and we are sharing that message with each guest and each new generation. With so many interesting inhabitants in our exhibits, water itself often goes unnoticed. But every day, we carefully maintain more than 2 million gallons of water within our Aquarium systems, providing the highest-quality water to 17,000 animals. All of the saltwater in our exhibits is homemade—a combination of Baltimore City water and a house blend of salts—and the water is tested daily for quality.

This commitment to water persists even beyond the Aquarium itself. In 2013, Eric Schwaab was appointed as our first-ever chief conservation officer, underscoring our dedication to leadership in ocean preservation and environmental stewardship.

“Our role in conservation includes incorporating new green technologies. “We are trying to be good citizens of the watershed,” Schwaab notes. “We’ve made an expanded commitment to renewable energy through a power purchase agreement with our partner Constellation, an Exelon company, and we’ve made our mechanical infrastructure more energy-efficient.”

Aquarium programs engage students and volunteers in projects to clean up the banks of streams and rivers, plant marsh grasses that filter Bay waters and pick up urban debris before it enters storm drains.

We have many partners in conservation, including national environmental organizations and generous supporters. We’ve worked with the Maryland General Assembly to address the effects of carbon-based pollution and ocean acidification. Our efforts in fishery sustainability have been bolstered by a grant from the Gordon and Betty Moore Foundation, which addresses the uncertainties of assessing stock and preventing overfishing.

“We have a unique opportunity to show people this other world,” Schwaab says, “and to inspire them to appreciate and protect our amazing aquatic resources.”
“People think pollution is caused by that smokestack or outfall pipe or the other guy, but each of us can make daily choices that play a huge part in protecting clean water.”

ERIC SCHWAAB  
CHIEF CONSERVATION OFFICER

1.8 million  
GALLONS OF OUR HOMEMADE SEAWATER WERE PRODUCED TO SUPPLY ROUGHLY 2.4 MILLION GALLONS OF SEAWATER IN OUR EXHIBITS AND BACKUP AREAS.

90,000+  
AQUARIUM LABORATORY TESTS WERE PERFORMED.

LEFT Director of Laboratory Services Jill Arnold tests the water quality for our exhibits. ABOVE As an Inner Harbor landmark, we have a responsibility to preserve the source of many of our resources: the Chesapeake Bay.
Whether it’s to capture a child’s reaction to Blacktip Reef or take a family photo in the Australian Outback, the camera quickly emerges when guests step into the Aquarium. “Families come to have a great time together, to create memories, to celebrate,” says Heather Doggett, director of visitor programs. “Children are always surprised when they come nose to nose with majestic animals from diverse habitats. They’ll look into an animal’s eyes and feel such awe that it ignites a spark to help the species in its natural environment.”

Some of the Aquarium’s staff, in fact, were just such children, who visited and were inspired to become professional aquarists, conservationists and marine educators. “Each day, our staff talks with young people about our animals, their excellent care and how we can all make decisions that will protect them,” Doggett says. “Their curiosity can translate into deeper learning. Eventually they start questioning and tracking threats to the health of the ocean.”

Staff are in the galleries, talking with guests and groups of schoolchildren as they explore. “They may push a cart with intriguing items for children to touch,” Doggett says. “They will talk about the incredible animals, the threats they face in the wild and how we can help.” The Aquarium also hosts immersion programs, including behind-the-scenes glimpses of animal care and overnight sleepovers with dolphins and sharks.

These interactions are critical to carrying out our mission. In 2013, guests enjoyed on-site event programming, our Friday night Cultural Series and the Marjorie Lynn Bank Lecture Series, which highlighted issues relevant to marine conservation.

Aquarium visitors won’t see the distinction, but they will encounter both paid and volunteer staff during a tour, and all of them share a passion for their roles. “We teach preschoolers about environmental manners, which are the building blocks of treating our Earth gently,” Doggett says. “Our interpretive staff have a gentleness and an appreciation of nature while also conveying scientific skills of observation and hypothesizing. Our teen interpreters are some of our best ambassadors because of their energy and their keen understanding of conservation, which becomes part of their value system.”
“Every day, we provide our guests with life-enhancing experiences—moments of laughter, learning, sharing, discovery and joy.”

HEATHER DOGGETT
DIRECTOR OF VISITOR PROGRAMS
One Head of Lettuce

Calypso’s Day Begins with a Head of Romaine—Followed by Eight More, Plus Brussels Sprouts, Carrots and Squid.

Calypso, the Aquarium’s beloved 500-pound green sea turtle, was the first to move into Blacktip Reef, which opened in August. In one sense, she was literally testing the waters. The exhibit’s installation began with one batch of seawater that was custom-made to match water in the natural Indo-Pacific environment.

“Because turtles don’t have gills, the transition wasn’t going to affect a reptile as much as it would a fish,” says Jack Cover, general curator. “In addition, Calypso’s waste helped grow the new biological filtration system.”

When Calypso arrived here more than a decade ago, she was cold stunned, and her injured left flipper had to be amputated. Now a permanent resident, she delights visitors and represents the fascinating character of all seven species of sea turtles.

In addition to this guest favorite, Animal Care staff are responsible for the health and well-being of nearly 17,000 Aquarium residents. Each one is meticulously monitored and cared for, but few visitors would suspect the intricate choreography at work in each display.

“We create microhabitats to make the animals feel comfortable so they act as they would in the wild, while also encouraging them to be within view of visitors,” Cover says. “A moray eel feels at home in a crevice near the window, while our reptiles frequent warm basking areas. This exhibit has 20 blacktip reef sharks, which is a number you would see in a healthy reef environment, as well as schools of smaller fish, which can duck into the coral when a shark comes along.”

When the Aquarium’s Washington, D.C., location closed in fall 2013, about 1,100 animals were moved to Baltimore and the off-site Animal Care Center. Whitetail damselfish, freckled hawkfish, emperor angelfish and a guineafowl puffer joined Brownie, a loggerhead sea turtle, and Toby, a rare blue lobster on the journey.

The year was also noteworthy for births in our animal population, including Scout, a Linne’s two-toed sloth; Victory, a puffin chick; and Chloe, a sandbar shark pup at home in the Atlantic Coral Reef exhibit.

By creating awareness of these animals and their habitats, Aquarium staff firmly believe they can make an impact. “Some people say it’s too late to save the world’s coral reefs, but there is still time,” Cover says. “The individual choices we make each day make a difference.”
1,346 ANIMALS WERE BORN.

3,496 HEADS OF ROMAINE LETTUCE WERE FED TO AQUARIUM ANIMALS.

“Calypso likes to eat shark food, which isn’t good for her. So we feed the sharks while she’s occupied at the underwater salad bar.”

JACK COVER
GENERAL CURATOR

LEFT Calypso, the Aquarium’s 500-pound sea turtle, was among the first animals to enter the new Blacktip Reef exhibit.

TOP Scout, a Linne’s two-toed sloth born in November 2013, was born to mom Ivy in our Upland Tropical Rain Forest exhibit.
A defining characteristic of blacktip reef sharks is their camaraderie—these fish often swim in schools to survive, and the star residents of our Blacktip Reef exhibit are no different. Our collection of 20 blacktip reef sharks spent 18 months at our Animal Care Center before moving into their new home, so once the big day came, they had already enjoyed plenty of bonding time.

Joining them were 759 other animals from 69 different species, including multiple shark species, clown triggerfish, emperor angelfish, two stingray species, a Napoleon wrasse, a moray eel and a green sea turtle. In a natural reef, the inhabitants would prey on one another. But in our setting, the marine animals are well-fed so that typical predators don’t feel the need to hunt for their food.

“The idea was to create a dynamic new exhibit that would tell a larger story,” says Holly Bourbon, curator of large fish exhibits and dive operations. “Visitors witness the delicate balance of an Indo-Pacific coral reef, enjoy its beauty and appreciate the importance of preserving these ecosystems.”

The $12.7 million, 270,000-gallon exhibit was an immediate hit and has enduring appeal, amplifying our dedication to conservation, education and restoration. In the first six months, Blacktip Reef welcomed almost 400,000 visitors, including 46,000 students.

Designed to provide Aquarium guests with multiple vantage points, the exhibit offers three side and top-down views, plus a floor-to-ceiling pop-out window that lets visitors virtually step inside the reef and enjoy a personal encounter with its inhabitants. Guests experience interactive presentations, witness shark feedings, learn from diver education talks and explore sea creatures on discovery carts. Overnight guests sign up for our “Sleepover with the Sharks” Immersion Tour, and enthusiasts continue to watch the action online through our live Shark Cam, in partnership with Discovery Channel.

The balance in Blacktip Reef is fascinating and fragile, just as it is in the wild. “When we remove too many of any marine species by shark finning or overfishing—or cause the bleaching and demise of ocean corals by climate change and acidification—the impact reverberates like a domino effect,” Bourbon says. “Before long, we could lose the ecosystems that sustain us.”
“As apex predators at the top of their food chain, sharks keep an ecosystem in balance and help maintain diversity—but they need our protection from overfishing.”

HOLLY BOURBON
CURATOR OF LARGE FISH EXHIBITS AND DIVE OPERATIONS/DIVE SAFETY OFFICER
Holding an oyster for the first time, feeling its weight and the pattern of smooth and rough waves across its shell, could be the first personal connection a child makes with the Chesapeake Bay. Through our education programs, those connections are strengthened as students further explore the watershed and learn about the critical role each oyster, and each living thing, plays in this habitat.

In our Week on the Bay program, students visit an oyster hatchery and learn about how the oyster population affects the Bay’s water quality, which depends on the mollusks for filtration. Students spend four days discovering marshes and waterways through beach seining, canoe trips and water testing, and even get the opportunity to sail on a skipjack.

Others get acquainted with the Chesapeake through our AquaPartners program, which offers the kind of hands-on learning experience children just can’t get in a classroom.

“In spring, fourth-graders go to Fort McHenry to watch birds, learn about wetland soils and plants, and address human impact by picking up debris,” says Joe Harber, director of education programs. “Fifth-graders visit Sandy Point State Park for a day of seining along the shoreline. With a long net pulled through the water, we’ll find small fish and crabs. Many of the students have never seen the Bay and think it’s the ocean.”

Thanks to the philanthropy of Transamerica and other generous funders, AquaPartners expanded in 2013 to include third-graders. Middle- and high-school students, who participate in summer camps through the Henry Hall Program, tag sharks off Ocean City, watch sea turtles in Georgia, explore coral reefs in the Florida Keys and examine the rocky coast of Maine. Once exposed to the natural marine world, many program participants return repeatedly for even deeper experiences.

Aquarium education also extends to partnering with marine professionals through forums like the Symposium on Sea Turtle Biology and Conservation; to legislators through advocacy on banning the shark fin trade; and to the public through the Fresh Thoughts Sustainable Seafood Dining Series and the weekly radio program, “A Blue View.” Our education enlightens and inspires people to help protect our aquatic treasures, and we couldn’t have done it without the individuals and organizations who offered their support in 2013.
“The children in our education programs may not all become Jacques Cousteaus, but they will carry environmental awareness with them throughout their lives.”

Even the smallest changes can affect the planet—for better or for worse. Ditching single-use bottles for reusable ones, for example, can save 168 plastic bottles a year. A major part of our mission is empowering others to recognize their impact and take action.

“Start claiming responsibility for your one piece of the world,” advises Laura Bankey, director of conservation. “Keep your neighborhood free of debris, find natural alternatives to pesticides, recycle rainwater, landscape with native plants that support pollinators and wild birds and avoid invasive species. Each one of us can have a significant impact.”

The National Aquarium is leading by example. At the end of 2013, we installed water fountains in the Aquarium that are capable of refilling reusable water bottles. Each fountain keeps track of the cumulative number of plastic water bottles that were saved. We recycle cooking oil, batteries, tennis shoes and e-waste. We don’t offer plastic lids and straws to our guests, and our plates and utensils are reusable or compostable.

Our efforts continue outside the facilities as well—last year, the plaza was certified by the National Wildlife Federation as a backyard habitat, welcoming migrating birds and butterflies that share our urban spaces.

We are also engaged in wider conservation efforts and actively advocate for conservation policies. We celebrated in 2013 when the Maryland General Assembly banned possession, sale, trade and distribution of shark fins, ending the state’s contribution to the collapse of shark populations worldwide.

Throughout the six-state Chesapeake Bay watershed, we organize volunteers to restore sand dunes and riparian buffers, and plant native trees, shrubs and grasses to improve filtration and prevent erosion. Students are helping to bring back the rare Atlantic white cedar to coastal wetlands, restoring natural habitat for many species of birds and plants.

One local project on the Patapsco River, Masonville Cove, was designated by the U.S. Fish and Wildlife Service in 2013 as the nation’s first Urban Wildlife Refuge Partnership.

“At a nearby site, the wetlands adjacent to Fort McHenry National Monument and Historic Shrine, volunteers recorded 261 species of birds, many of which were migrating along the Atlantic Flyway,” Bankey notes. “Our little green patches are important for wildlife.”
“Whether it’s supporting the use of reusable bottles, restoring wetlands or promoting sustainable seafood, the Aquarium empowers others to make thoughtful choices to ensure healthy communities.”

ONE SATELLITE TAG

EACH ANIMAL COMES TO US WITH A STORY. UPON RELEASE, MANY BEGIN A NEW TALE WE CAN FOLLOW THROUGH SATELLITE TAGS.

Portsmouth, as of press time, had traveled nearly 3,000 miles since his stint in rehab at the National Aquarium's Animal Rescue Center in summer 2013. Thanks to this endangered loggerhead turtle’s satellite tag, we’ve been able to track his progress in the wild.

A year ago, however, his story wasn’t such a happy one. Portsmouth had ingested a recreational fish hook and was transferred to the National Aquarium for treatment. When surgeons removed the fish hook from his esophagus, they were surprised to discover a second, older one. Thankfully, the center’s veterinarians and specialists were able to successfully remove both, and Portsmouth was released into the warm waters of Virginia Beach in October.

One at a time, injured marine animals arrive at the National Aquarium’s Animal Rescue Center, and each gets expert, individualized attention. Some released turtles and seals are equipped with satellite and acoustic tags for tracking and research. The turtle transmitters generally last longer than those on seals, which lose the devices when they molt.

“We are validating our rehab efforts,” says Jennifer Dittmar, manager of animal rescue. “We’re making sure that what we’re doing is leading these animals to a successful reintroduction to their natural environment and collecting data on migratory patterns and environmental conditions.”

After a record-breaking cold-stun season, our rescue team joined New England Aquarium staff on a Sea Turtle Trek to Florida, where 52 rehabilitated sea turtles were released. Several seals were also rescued in 2013, including Sodapop, a harbor seal that arrived emaciated, with a severe respiratory infection and cuts and scrapes on his face and hips; Ponyboy, a grey seal with a serious wound to his left front flipper; and Eyegore, a grey seal with respiratory and eye infections. All were treated and released.

Animal Rescue offers outreach and education events and maintains a 24-hour stranding hotline. Since 1991, Animal Rescue has responded to reports of stranded marine mammals and sea turtles. In June 2013, the rescue team released two Kemp’s ridleys—a critically endangered species—and a green sea turtle into the Chesapeake Bay, celebrating the 100th, 101st and 102nd successful treatment and return to the wild.
“Each injured or ill sea turtle that we can heal and return to the wild adds to the genetic viability of the natural population, which is really important.”

JENNIFER DITTMAR
MANAGER OF ANIMAL RESCUE

LEFT Animal Rescue staff removed two fishhooks from the esophagus of loggerhead sea turtle Portsmouth. TOP In April, our Animal Rescue team helped release 52 rescued turtles off the coast of Florida. BOTTOM After three months in rehab at our Animal Rescue Center, Sodapop was released at Assateague State Park.

107 ANIMALS HAVE BEEN REHABILITATED AND RELEASED SINCE 1991, WITH 2013 MARKING OUR 100TH RELEASE.

3,600+ HOURS WERE LOGGED BY VOLUNTEERS THROUGH ANIMAL RESCUE EFFORTS.
Whether it’s rescuing and caring for marine animals, maintaining water quality for our exhibits, leading conservation efforts or educating others on the world’s aquatic wonders, everything we do at the National Aquarium revolves around one critical element: water.

Our water is constantly changing form, the eternal shape-shifter, but in all its permutations, it is vital to our existence. Water’s most powerful manifestation, the ocean, holds the key to our survival. We have yet to explore all of its vast mysteries or understand all of its lessons, but we do know that we ignore its health at our peril.

The National Aquarium showcases the vibrant colors of tropical fish, the amazing structure of coral reefs and the silky glide of sharks and rays. We take visitors to the Australian Outback, the Indo-Pacific islands, the rain forest and the Chesapeake Bay and introduce their fascinating inhabitants. We educate our guests about their value—and the threats that particularly jeopardize so many aquatic species. From overfishing to acidification, many of our most intriguing sea creatures are under stress or severely endangered.

Our ocean’s inhabitants share a world of balance and beauty, with an intricate interconnectedness that sustains marine life and extends to human beings. An aquatic plant or animal may hold the cure to a devastating illness or be an essential link in a chain of sustainable nourishment. We simply cannot disregard the well-being of Earth’s most prominent feature. For the sake of generations present and future, we must be good stewards of our one ocean.
2013 OPERATING HIGHLIGHTS

**REVENUE**

- Admissions $24,253,033
- Contributions and Grants $8,881,808

ONE DONOR

The National Aquarium recognizes the power of one. Through individual gifts, we have boosted civic pride, spurred the region’s economy, educated thousands about aquatic ecosystems and ocean conservation, and ensured a sustainable future for many sea inhabitants. We extend our deepest gratitude to each individual, foundation, corporation and governmental partner whose generosity in 2013 is helping us realize our shared vision.
Lifetime Giving

The National Aquarium exists today because of the leadership and continuing support of the entire community. The following list recognizes those who have contributed a total of $200,000 to the National Aquarium Institute since the Aquarium first opened.

National Aquarium Institute Capital Campaigns

Enhancements to our exhibits will keep us at the forefront of world-class, must-see aquariums. The National Aquarium Institute is embarking on Capital Campaigns to fund these necessary capital improvements, with an emphasis on sustainability. We thank the following donors for their support.

$1,000,000
City of Baltimore
Larry and Jane Droppa

Jennifer and George Reynolds
State of Maryland
The Whiting-Turner Contracting Company

$250,000–$999,999
Charles T. Bauer Foundation
Rand Griffin
The Joseph and Harvey Meyerhoff Charitable Family Funds

$100,000–$249,999
Anonymous
Winnie and Neal Borden/The Harry L. Gladding Foundation
Bob and Carol Carter
Colleen Dilschneider
The Henry and Ruth Blaustein Rosenberg Foundation, Inc.

$25,000–$99,999
Ms. Dana Dicarlo and Mr. Scott Plank
Mohannad F. Jishi
The Harvey M. Meyerhoff Fund, Inc.
Middendorf Foundation, Inc.
Mr. and Mrs. B. Dwight Perry
Don and Joan Pettit
John and Susan Racanelli
Lee & Whitney Riley
Betty and Tom Robinson
SimEx Iwerks

$10,000–$24,999
Mr. and Mrs. Philip Gallant
Bruce, Caren, Bret, and Corie Hoffberger
National Marine Sanctuary Foundation
Mr. W. Charles Rogers III
Corporate Members

Through membership, corporations support our initiatives while creating a special way for their employees and clients to explore the Aquarium. The following were members of our Corporate Advantage program in 2013.

In pursuing our mission to inspire conservation of the world’s aquatic treasures, the extent of our impact depends on the generosity and dedication of our donors, volunteers and members. Because of them, we’ve been able to educate others, advocate for our ocean and take action toward a healthier planet.

You have the opportunity to be a part of that impact. As a private, nonprofit organization, the National Aquarium needs your support to continue effecting change through its world-class exhibits, education programs and conservation initiatives. Join us as we help transform the way humanity views and cares for the ocean. Become a member, make a donation or dedicate your time.

Through our volunteer program, you can take on a variety of exciting responsibilities, including feeding our animals, guiding guests through the exhibits, assisting our aquarists and more. To learn more about volunteering, visit aqua.org/volunteer, call (410) 576-3886 or email volunteer@aqua.org.

To find out how to make an individual, corporate or foundation gift, call our development office at (410) 659-4217. We greatly appreciate your support and encourage you to explore more ways to get involved at aqua.org.
